Dermo Cosmetology Clinic

Is one of its kinds where dermatology & cosmetology have been amalgamated in a hospital setup

Signs of ageing are more evident on face due to exposure to sun, wind, pollution and excessive heat or cold. Other factors that can accelerate facial ageing are hormonal changes, depleted collagen production, thinning of skin due to free radical damage, facial bone changes and slacked facial ligaments, improper diet, exercise and smoking.

Face rejuvenation consists of noninvasive to minimally invasive treatments to reduce facial imperfections. The most successful approach is the use of combination of procedures and treatments.

**This department uses only
USFDA approved equipment**

Laser hair reduction (LHR Soprano Ice / Alma Laser)

Laser hair reduction is one of the most common procedure to remove unwanted hair on face and body. This procedure works by using concentrated light energy which destroys the hair follicle and helps to reduce further hair growth.

Soprano ICE, a US FDA approved platform offers the most complete and effective hair reduction by incorporating multiple laser wavelengths that helps to treat various hair types quickly and painlessly. It requires on an average 6-7 settings and time taken depends on the area involved.

Laser Facial/PicO Laser

Pico laser technology is the most advanced recent FDA approved laser that addresses the majority of common skin imperfections such as skin spots, stubborn pigmentation, dark spots/dyschromia, freckles, melasma, lentigines, moles. Its advanced technology also helps in tattoo removal. Additionally, it also rejuvenates your face to get back the youthful glow and maintain a smoother radiant skin.

Fraxis Duo Laser Microneedling RF

FRAXIS DUO Fractional co2 Laser combines carbon dioxide fractional laser and micro-needle RF fractional technology. This dual technology ensures significantly improved skin quality and texture through intense superficial stimulation, increased volumetric heating, and deeper heat diffusion. This safe and highly advanced procedure can be used to treat both the face and body and promotes the reduction of wrinkles, hyperpigmentation, acne scars, uneven texture, pore size, stretch marks, and more.

Microdermabrasion (skin polishing)

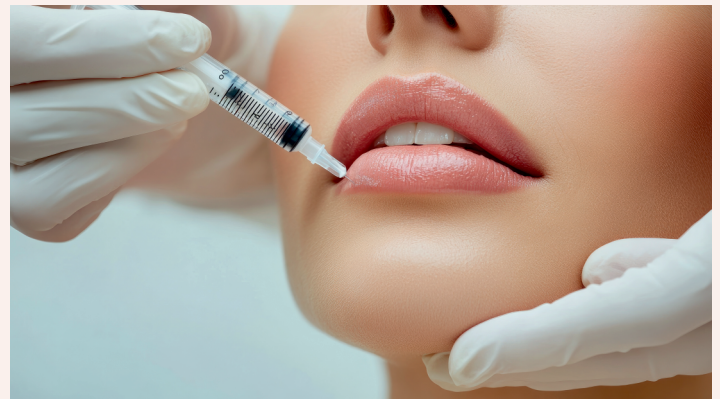

Exfoliates dead skin and reduces open pores, acne scars, and uneven skin tone.

Radio-frequency for Skin Tightening

Collagen production is increased and the facial muscles are tightened. This gives firmness to the skin & improves its tonicity. Combination with laser facial gives better results.

Chemical Peels

Chemical peels are solutions applied to the face to improve the appearance of the skin by reducing age spots and evening out the skin tone. They are used to reduce active acne, superficial acne scars, epidermal melasma, hyperpigmented spots on the face. It also helps in brightening of the skin and treating sun spots on the face. Glycolic peel · Salicylic peel · Yellow peel · Melaspeel · Glow Peel

Botox

Botox is the most popular wrinkle reduction treatment. It is a simple non-surgical procedure that smoothens the deep persistent facial lines by relaxing the tiny facial muscles that cause expression lines.

Fillers & Skin Booster Injections

Dermal fillers restore volume and fullness to the skin to correct moderate to severe facial wrinkles and folds such as nasolabial folds, lip augmentation and scars.

Skin booster treatment involves injecting hyaluronic acid which is a soft, gel-like substance under the skin, which improves the skin's elasticity, firmness and radiance giving an overall glow to the face. They help in improving the skin texture, elasticity, hydration and overall appearance.

Tattoo Removal. Birth Mark & Mole Removal

Different colored tattoos can be removed with this multi-wave length laser without the risk of scarring. Rapid absorption of light energy from the laser beam by the tattoo ink causes it to break into very tiny particles which is then carried away by the scavenger cells. Pico Laser removes tattoo whilst leaving the surrounding skin unharmed. Only cream

anesthesia is required. Pigmented lesions like nevi (mole), age spot, liver spots, freckles, Birth marks (café-au-lait spot, nevus of ota, Becker's nevus, Giant melanocytic nevus) can be easily treated without risk of scarring or causing depigmentation.

Growth Factor Concentrate(GFC)/PRP

GFC stands for growth factor concentrate therapy. It is a simple, safe, highly effective OPD based procedure. Wherein we use specialized kits that concentrate on the growth factors which have abundant regenerative properties. On the scalp, they help in restoring pre-existing hair follicles, replenish them with necessary nourishment, increase the growing phase of the hair cycle.

We also have specialized growth factors for face that help in collagen remodeling and production of hyaluronic acid, hence used in facial rejuvenation, acne scars, pigmentation, wrinkles and anti-ageing which helps the skin to look radiant, youthful and supple.

Daavlin phototherapy

Unit consists of both UVA (ultraviolet) and UVB system. We can use either 'one of them or both in combination. It is useful For treating cases of Psoriasis, Vitiligo, atopic dermatitis, seborrheic dermatitis, uraemic pruritus, pruritus due to cholestatic jaundice and few more conditions.

Electrosurgerv & Crvosurgerv

Warts, Skin tags, Xanthesma, DPN, corns, seborrheic keratoses, small basal cell epitheliomas, actinic keratoses, sebaceous hyperplasia etc can be easily treated using either CONMED HYFREATOR OR CRYOSURGERY.

Hair restoration Surgery

Patterned hair loss in males and females are cause of distress in the young and old. These are diagnosed and treated at dermo clinic by experts trained in

Canada and USA, All patients undergo a complete examination of the scalp following which a treatment plan is made as per the patients' needs and circumstances. A combination of medical and surgical options is discussed. The Dermo clinic offers state of artesthesia giving Follicular Unit Extraction (FUE) type of hair transplant surgery for those needing it. This latest form of hair restoration surgery is routinely performed with complete regrowth achieved in 6-8 months.

Tumescent Anaesthesia Liposuction and Fat grafting

This is the safest form of Liposuction performed by dermatologists across the world Liposuction is the process of removal of subcutaneous fat for body shaping. This fat can be used for correcting volume defects on face and under body scars. Fat is the best filler that can help volume loss on face due to aging and diseases. Fat has stem cells that have anti-ageing effects on face and hair growth benefits when nanofat is injected in scalp. Large Lipomas are treated by liposuction under local anaesthesia giving a scar free solution.
